designaffairs

creating change
brand shaping | innovative | human centered

We consult successful brands globally and support them at the development of holistic product experiences and innovative interfaces. We like to think out of the box, inspire and change perspectives. At present, we employ over 80 staff at locations in Munich, Erlangen and Shanghai.

Within interdisciplinary teams our experts of the areas research, strategy, design and engineering create innovative solutions for hardware, software and services. Our dynamic team structure and flat hierarchy encourage open communication – this way we create product experiences that inspire.

For our team in our office in Munich we are now looking for a

(Junior) User Interface Designer

We are looking for inspiring designer, who like to break rules and strike new paths. Innovations are formed interdisciplinary at designaffairs. A dynamic team structure and flat hierarchies are combined with experts from different units like Research, Design Strategy, Color Material, User Experience, Product Development and Software.

Did you studied interaction, media or graphic design? Are you looking for a creative environment where you can contribute your skills and expand them continually? As a digital native you are driven by the wish to design interfaces better and more emotionally? Then you are interesting to us, because we are looking for convinced designers and inspiring perspectives.

Your tasks:

- According to brand strategic design processes you design the virtual appearance of software surfaces on various platforms (PC, embedded systems, tablets, smartphones etc.).
- Next to your colleagues from the user interface design, you will be working closely with the usability team. The points of contact with the other internal teams – design strategy, industrial design, color material finishing pattern, engineering and software development – enrich your working environment.
- Your future colleagues are from all over the world. We often carry out projects in collaboration with our colleagues in Shanghai.

Your skills:

- You have successfully achieved a degree in communication or interaction design or a comparable program.
- You possess interest and first experiences in the area of GUI respectively software surface development and you have already worked together with software and usability engineers.
- You have an eye for graphical details and subtleties as well as for the overall design context.
- You know about ongoing trends in screen design and motion graphics and therefore are able to set graphical impulses in ambitious designs.

- You perfectly cope with tools to transfer your ideas efficiently in screens and animations (Photoshop, Illustrator, Flash, After Effects etc.).
- You are fluent in German and English, both in written and verbal communication.

What you can expect:

At designaffairs the “We-feeling” is very important. We experience this every day when we cook together in our open kitchen area, barbecue on our rooftop terrace or when we chill-out at the campus’ pool.

designaffairs counts to the most award-winning design agencies worldwide. Our success is based upon a concept of combining creativity with scientific methods. Together with our designers, ergonomists, engineers and strategists, you will create innovative and ambitious designs for both our national and international clients coming from various industries, such as transportation, medical technology, consumer electronics, building technology, household appliances and software.

Diverse projects are awaiting you: from complex software products over hardware to innovative operation concepts via multi touch and gesture. The required technologies for this are available for you in our interface lab and serve you and your colleagues as a creative playground.

We look forward to meeting you! You will get to know our agency and your future colleagues better in a personal interview. Also, we would gladly discuss your professional development potentialities at designaffairs.

Please send in your application, including a digital portfolio (PDF or weblink) with comprehensive job references to:
